

PRISM
(New York Partnerships for Regional Invasive Species Management)
NON-NATIVE PLANT INVASIVENESS RANKING FORM

PRISM: Long Island Invasive Species Management Area

Scientific name:	Ulmus pumila L.	USDA Plants Code: ULPU
Common names:	Siberian elm	
Native Distribution	Asia	
Date Assessed:	October 18, 2009	
PRISM Assessors:	Gerry Moore	
PRISM Reviewers:	LIISMA SRC	
Date Approved:	November, 4, 2009	Form version date: 13 April 2009
New York Relative Maximum score:	52.50	Date NY assessment approved: Nov. 4, 2009
New York State Invasive Rank:	Moderate	

SUMMARY OF PRISM RANKING RESULTS:

Distribution: Widespread

Estimated number of infested sites: >10

PRISM Invasiveness Rank[§]: Moderate

A. DISTRIBUTION AND ABUNDANCE (KNOWN/POTENTIAL):

1. What is the species distribution and abundance in the PRISM?
- | | |
|--|-------------|
| A. Not present | Not Present |
| B. Occurs in three or fewer natural areas (locations that are at least ¼ mile apart) with no infested area* >1 acre or containing >100 individuals | Restricted |
| C. Present in 4–10 natural areas, or with one occupied location >1 acre or containing >100 individuals | Common |
| D. Present in >10 minimally managed areas | Widespread |
| U. Unknown | Unknown |

Answer: Widespread

Describe distribution:
Reported from all counties in the PRISM in over 10 minimally managed areas.
Sources of information:
Brooklyn Botanic Garden, 2009; Weldy & Werier, 2009.

[§]Not Assessable: not persistent in the PRISM, or not found outside of cultivation.

*Definition of “infested area” is the “...actual or percentage of land occupied by [canopy cover of] weed plants” NAWMA (North American Weed Management Association) 2002. North American Invasive Plant Mapping Standards (see <http://www.nawma.org/>).

PRISM
(New York Partnerships for Regional Invasive Species Management)
NON-NATIVE PLANT INVASIVENESS RANKING FORM

2. What is the likelihood the species will occur (if not yet present) or expand its distribution and abundance (if already present) in the PRISM?

Answer: Very likely

Documentation (e.g.: history of establishment in PRISM, suitability of habitats and climate, distribution models, literature, expert opinions):
Species already established in PRISM.
Sources of information:
Brooklyn Botanic Garden, 2009; Weldy & Werier, 2009.

B. INVASIVENESS RANK IN THE PRISM:

Is the species distribution Widespread or Common?

Yes: Go to column A in table below.

No: What is the likelihood of species occurrence or expansion? Answer: Very likely

- | | |
|--------------------|----------------------------------|
| Very Likely: | Use column A below |
| Moderately likely: | Use column B below |
| Unlikely: | Use column C below |
| Zero likelihood | Invasive potential Insignificant |
| Unknown | Invasive potential Unknown |
| Not assessed | Invasive potential not assessed |

Assign a PRISM invasiveness rank to the species based on its New York Relative Maximum Score, using the designated column in the table below.

New York Relative Maximum Score	New York Invasiveness Rank	A	B	C
> 80.00	Very High	VH	H	M
70.00–80.00	High	H	M	L
50.00–69.99	Moderate	M	L	Ins
40.00–49.99	Low	L	Ins	Ins
<40.00	Insignificant	Ins	Ins	Ins

Column used: A (Insert PRISM Invasiveness Rank on page 1)
